

## APRS SSID's

SSID's, Secondary Station Identifiers, were developed and promoted some years ago by Bob Bruninga, WB4APR.

They were intended to allow operators a means to identify a station that was not their main or base station.

When using APRS, operators are encouraged to use these SSID's as for 'normal' packet radio applications.

Icons are also available in the software programs to match the SSID's.

The standard secondary identifiers are as follows:

ID	Name
1	Ambulance
2	Bus
3	Fire Vehicle
4	Bicycle
5	Sailboat
6	Helicopter
7	Aircraft
8	Power Boat
9	Car
10	Motorcycle
11	Balloon
12	Jeep
13	Recreation Vehicle
14	Truck
15	Van
