

Subject: 70cm 8el Yagi

From: G8MNY@GB7CIP.#32.GBR.EU
 To : TECH@WW

70cms 8 ELEMENT YAGI BEAM

Boom Length = 1.48 m. Boom dia = 15mm x 15mm (square).

All Element dia = 12mm. Driven Element = Folded Dipole

This Yagi should not need a balun as it will resonate under it's own merit.

The above design has not just been drawn by myself, I have constructed this antenna a number of times and it WILL work and a V.S.W.R of less than 1 to 1.2 can be achieved.
